

Tufcot Engineering Ltd Environmental Policy Statement

As with many manufacturing industries, the production and machining of Composite Bearing Material uses raw materials and produces large amounts of waste. The process also uses energy and generates heat and noise. Tufcot Engineering is committed to minimising the impact of its activities on the environment, and will work with our suppliers, customers, and neighbours towards this aim.

The key points of our strategy to achieve this are:

- Minimise waste by evaluating operations and ensuring they are as efficient as possible.
- Increase environmentally focused projects.
- Actively promote recycling both internally and amongst customers.
- Focus on looking at raw materials and future applications that are environmentally friendly.
- Encourage the involvement of all staff in the implementation of this policy.
- To provide environmental awareness training for all employees.
- Meet or exceed all the environmental legislation that relates to the company.
- Control noise pollution by either reducing at source or avoiding its escape from the premises.
- Achieve environmental KPI targets.
- Encourage our suppliers to adopt similar environmental principles to this policy.
- Improve the efficiency of energy usage.
